Windows CE operating system

Software

Receives stock inventory by scanning barcoded mill tags.

Relieves on-hand stock and remnant inventory.

Performs book to physical reconciliation scans.

Records and tracks all shearing, bending, end prep, and trailer loading processes.

Validates the assigned trailer for each bundle as it is loaded.

Warns if you attempt to load a bundle that has not been scanned at required fabricating stations.

Performs inquiries, allowing you to view the last scan and other information for a bundle.

Performs "Not Loaded" inquiry: lists bundles in a control code that have not yet been loaded.
